2016 Pete Peterson 886-9021 (Advisor)

Membership Chairperson

Wayne Klement 954-6298

Please join us **March 12th** at 9:00am for the monthly meeting. There is an optional social hour that begins at 8:00am followed by an educational program at 9:00am, followed by the monthly meeting. Visitors are always welcome.

Articles or news to be included in the *Cutting Remarks* should be emailed to your Editor, Mike DeMeritt (silverlininggemstones@gmail.com), or feel free to call him at 520-203-8430. Submission deadline is the 20th of each month. Thanks!

THE PREZ SEZ by John Poole

March is here, our business meeting will be March 12, 2016.

The weather in February was great, even during the Gem Show. All of OPLC's events; Tucson Frolic, Hob Nob, booth at the TCC were well organized and represented OPLC in an outstanding manner. Thanks to all the volunteers!

After our business meeting we will have our March Tailgate Sale. So, if you are not going to the Deming Rockhound Roundup and still want to shop after the big Tucson Gem Show, come on down!

You'll have another opportunity to purchase tools, rocks, slabs and cabs. Information regarding the sale is in the newsletter and posted on the bulletin board in the Training Center.

I'll see you March 12th at 8 am for coffee and treats, and 9 am for a very interesting program followed by the business meeting and then the sale. Wear your OPLC badge and get a free raffle ticket with a purchase.

-John

ELECTROLYTIC CLEANING OF SILVER

The term "electrostripping" refers to cleaning silver (or other metal) by either electrical or chemical means whereby the oxides are freed from the silver, leaving a bright and beautiful result. This is another "simple kitchen version" of electrostripping that is easy to do, works well, and makes little mess (I have published an actual electrical version in another newsletter, probably two or three years ago...) This one is a chemical version using common household chemicals, and works very well for larger items, especially flatware and hollowware.

Line a large spaghetti pot with aluminum foil - it doesn't have to be perfect, just good enough to catch the oxide transfer from the silver you are cleaning. Mix a dilute solution of equal parts baking soda, liquid soap (such as Dawn, etc.), and salt. A good mixture is 1/4 cup of each per gallon of water. Set the silver inside the pot, and bring the mixture to a simmer on your stovetop. Allow the mixture to stand for 15 to 30 minutes. During this time the oxides from the tarnished silver will transfer to the aluminum foil lining your pot, and the foil will become quite darkened. Carefully "fish out" your silver, discarding the aluminum foil. Wash the silver well, and rinse with warm water before drying. Your silver flatware and hollowware should look like they've been on a jeweler's buff!

-Written/Compiled by Mike DeMeritt, March 2016

Front Cover Pictures: Luscious gem-quality crystals of the beryl variety known as **Aquamarine**, March's birthstone. Stunning botryoidal "**Gem Silica**" **Chrysocolla** from our own state of Arizona.

Cutting Remarks, Volume 2016, Issue 3, March 2016. Published monthly by the Old Pueblo Lapidary Club, 3118 N. Dale, Tucson, AZ 85712. Telephone: (520) 323-9154, a non-profit organization.

OPLC MONTHLY MEETING

February 13, 2016

The meeting was brought to order at 9:00 AM by President John Poole.

He thanked Victoria Fila for bringing refreshments, and eight new members and guests were introduced.

The minutes of the January meeting were approved as they were published in Cutting Remarks.

Treasurer's report: Bob Powell gave a brief report which will be filed for audit.

Frolic and Hob Nob: Gloria Jean Shenanaquet was in charge this year and thanked Ruby Munson for showing up during the event. She said all went well. Carol Brown helped out during the Hob Nob evening and urged the OPLC membership to attend next year to enjoy all of the fabulous faceted stones as is a very fun evening. OPLC member Mike DeMeritt won first place in the natural stone contest.

TGMS: This year OPLC had a display cabinet in the main show at TCC and that effort was headed up by Giac D'Acquisto. He thanked Terry Cox and Kerrie Gimmler for helping select the items to be displayed. Giac was very happy with the entries and said they tried to be very fair in selecting from members' items and the way they were displayed. It was mentioned that at least three of our members have booths at TGMS main event.

Clubhouse ceiling repair: A portion of our ceiling needed a fast and thorough repair and

John Poole thanked Dave Schulte and Stacey Brown for doing an excellent repair job.

Clubhouse clean-up: Dave Schulte and crew did an excellent job cleaning the meeting room and kitchen prior to the Frolic/Hob Nob events. John thanked them for a job well done.

TAILGATE SALE: In March we will hold another parking lot tailgate sale. Vendors must be members only and the items for sale must relate to Lapidary. This will be held AFTER the March business meeting. At 8:00 AM the north lot will be open for vendors to park.

PIMA COUNTY FAIR BOOTH: Bob Powell says all is well with our booth, volunteers are lined up.

FIELD TRIPS: Janelle Cortright said that her January 23rd rock hunting trip had 24 in attendance and they all left happy.

Wolfgang Mueller is having a trip to Mission Mine on February 27th.

OPLC hats and patches: We still have a few hats for sale and we are also have for sale quite a few old patches for \$1.00 each, they are not the current logo on our new hats and t-shirts.

Kim Filips gave her personal overview of the Tucson Show this year and several members chimed in.

Door prize won by Don Truitt.

The meeting adjourned at 9:55. Twink Monrad, Secretary

MARCH TAILGATE SALE

- Tailgate Sale - WILL NOT START UNTIL AFTER THE MEETING!
 - OPLC Members Only!
- Items for sale - MUST be related to the lapidary or metalsmithing arts, or OPLC activities!
- Parking for Participants - North Lot, FROM 8:00 AM - 8:30 AM ONLY!
- The North Parking Lot WILL be open to monitors working that day!
 - After 8:30 am, the North Parking Lot will then be open to the General Membership

Again, the Tailgate Sale WILL NOT START until after the meeting is over!

*I am trying to check my habits of seeing,
To counter them for the sake of greater freshness.
I am trying to be unfamiliar
With what I am doing...*

March 2016 OPLC speaker

Jim Turner on “The Mighty Colorado: Geology and Mining from the Colorado Rockies to Mexico”

We are in for another very unique treat for our March 12, 2016 OPLC monthly meeting. Noted Arizona historian, retired professor, and author, Jim Turner, is coming back to speak to us, with a sneak preview of his new book, *The Mighty Colorado River: From the Glaciers to the Gulf*, to be released in July.

From Lulu City to the gold and silver rush on the Front Range, the Colorado Plateau and the forming of the Grand Canyon, the formations in Arches National Park, uranium mining in Moab, and on down the river to Mexico, we will see how the earth was formed and how the Colorado River has been a part of it all.

Jim Turner is a very knowledgeable and eloquent speaker, so please mark your calendars and not miss this fascinating talk!!! He was also very kind to step in last minute as our previously scheduled speaker canceled.

Looking forward to seeing you all,

Helen Serras-Herman, OPLC Program chair

MARCH BIRTHSTONE: AQUAMARINE

People born in March are proud to show off their birthstone: the beautiful and subtle birthstone **Aquamarine**, a greenish-blue variety of the cyclosilicate *Beryl*. In cyclosilicates the $[\text{SiO}_4]$ tetrahedral are linked together to form rings. The Si:O ratio in the silicate part of the formula is always 1:3, e.g. Si_3O_9 , or Si_6O_{18} . The symmetry of the rings is normally reflected in the crystal symmetry, as in the case of beryl, which has $[\text{Si}_6\text{O}_{18}]$ rings and is therefore hexagonal. Crystals are commonly found in the simple prismatic form, and less commonly with several crystal forms. Prism faces are often vertically striated or grooved. They can be larger than 200 metric tons, and sometimes form as columnar aggregates. Cleavage is indistinct on the basal plane $[0001]$, and fracture is conchoidal or uneven. Hardness varies from 7.45—8.0 on the Moh's scale, and density is about 2.7. It has a vitreous luster, is transparent to translucent, and large crystals can vary in transparency. As noted previously, the crystal structure of beryl is characterized by sixfold rings of $[\text{SiO}_4]$ tetrahedral, linked by Beryllium $[\text{BeO}_4]$ tetrahedral and Aluminum $\{\text{AlO}_6\}$ octahedral; the $[\text{Si}_6\text{O}_{18}]$ rings lie on top of each other, and thus form endless channels along the *c* axis of the crystal. Minor amounts of Li, Na, or other alkali metals can be present, which like H_2O and CO_2 can be accommodated in the channels. Small amounts of Cr^{3+} , Mn^{2+} , or other transition elements give rise to color caused by these impurities. In aquamarine, ferric $[\text{Fe}^{3+}]$ and ferrous iron $[\text{Fe}^{2+}]$ are the impurities which impart the lovely color: Fe^{2+} causes blue, and Fe^{3+} imbues a yellow hue. The mixture of the two causes the seawater color. Most aquamarine stones are heated in the rough to drive off the Fe^{3+} (the yellow component), so that the stones maintain as saturated a blue hue as possible. This is done to probably more than 95% of all aquamarines, which puts this stone in the same category as Tanzanite in a fashion - most of the "natural" stones out there actually aren't natural! Aquamarine is a common mineral, primarily occurring in granites and granitic pegmatites. Other forms of beryl can be found in mica-schists and in veins in bituminous limestone.

Aquamarine is found all over the world, and important gem deposits include Minas Gerais, Brazil; Mozambique; Nigeria, Zambia; Pakistan; and a few other African deposits. Aquamarine rough is among the easiest of all facet rough to procure, though prices have been steadily escalating since the 1990's. Top-clarity, top-color, and larger-sized pieces are out there, but substantially more difficult to locate than more typical pieces. Most aqua is very lightly-toned, and darker pieces tend to have fairly grey masking. If you can find it, rough from Santa Maria, Brazil, is very dark for aqua (40% tone or better), and rarely displays the grey mask that makes faceters cringe. Aquamarine tends to have good "crystal" in switching from outdoor to incandescent lighting, though it is definitely a "nightstone" (prefers incandescent). Aquamarine is incredibly easy to facet, and presents few problems for the novice. In smaller pieces of lighter-toned material, it is very inexpensive (compared to other facet rough, anyway!) Don't scrimp on clarity - most aqua rough is very clean, and inclusions lower the price.
